Part 1: News and infos

Part 2: Detailed reports of the national co-ordinators

Part 1: News and Infos

1. 9A5W now responsible to IARUMS Region 1

We were informed, that the EC-Member 9A5W (Nikola) is now responsible to the IARUMS Region 1 (Sun City result). Of course we are very glad about his election. Remember the Codar problems at RTZub Croatia about 2 years ago! There was an excellent cooperation between Nikola and our IARUMS Region 1.

We know: We can count on Nikola !

2. Do not forget the Intruder-Logger!

Besides our Intruder Alert System (Hani's idea!) we have our Intruder-Logger, which is also open to all users worldwide. You can store your intruder observations in real time mode! Do not forget to use this system and read the entries from all parts of the world! <http://peditio.net/intruder/bluechat.cgi>

3. 28 MHz and 24 MHz – lost bands?

The situation in October was worse as ever before.

We found much CB-like traffic (AM, FM, SSB) between 28 and 29.7 MHz in September and again in October 2011. Origins: Europe, Brazil, Far East. Besides that we observed, that the band is still crowded of numerous CIS taxi-cabs in FM. The conditions on the upper bands are raising, so we are realize the "apocalypse" on our exclusive band. **VK4TJ, John, observed that even 24 MHz is daily abused by Asian Cbers.** He logged them on the following QRGs: 24890 – 24900 – 24905 - 24912.5 – 24915 – 24925 – 24935 - 24937.5 – 24945 – 24955 – 24965 – 24975 - 24985

4. Meeting at Frankfurt Airport

On Oct. 23rd VE6SH (Tim), PB2T (Hans) and DK2OM (Wolf) had a meeting at Frankfurt Airport discussing the improvement and the future of the IARU – Monitoring System.

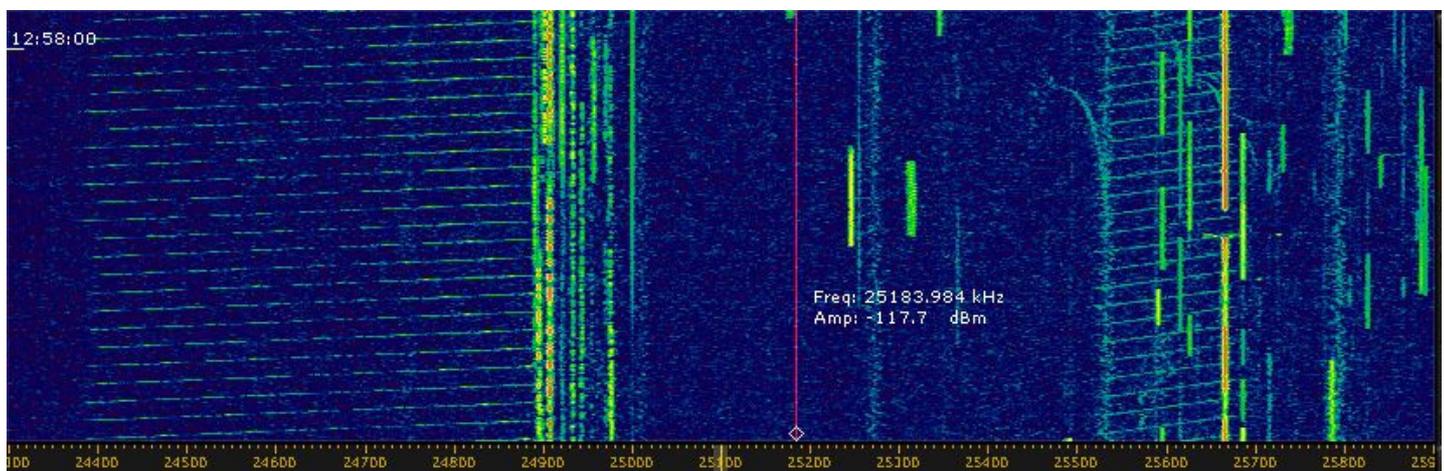

From left: VE6SH, Tim, President of the IARU, DK2OM, Wolf, Coordinator IARUMS Region 1, PB2T, Hans, President of the IARU Region 1

5. Codar Radars still (or again) disturbing 24 MHz

The Codar from Venice left 24 MHz and moved up to 25600 kHz. A bit later another Codar appeared on 24890 – 24900 (real spread: 24400 – 24900). It was also transmitting with 2 sweeps/sec and the typical blocks in each sweep.) 9A5W, Nikola, and HB9CET, Peter, supported my efforts to find out the source. Many thanks dear friends!. **Please observe the screenshot below! (DK2OM with Perseus)**

You can see a Codar Radar on 24400 – 24900 kHz and the Codar from Venice on 25600. The other vertical lines above our 24 MHz-band are caused by CIS taxi cabs, transmitting in FM (= F3E). The location of this Codar can be North- or Central-America – Sporadic-E conditions. We need more bearings and observations. Another Codar was found at the **USA West-Coast**, covering the whole 24 MHz-band.

ARSK MONITORING OVERVIEW FOR OCTOBER 2011

Very few intruders were recorded, and my computer managed to delete the record, which I cannot duplicate – my apologies. No Somali illegal intruders were recorded in October, and there were far fewer from South Sudan which has recently signed up to the ITU protocol. Hopefully that will lead to better control in the country. There remain some in Francophone Central Africa using vernaculars and some French.

E.H.M. Alleyne, 5Z4NU
ARSK National IARUMS Co-ordinator

ARSK – Kenya – 5Z4NU (Ted)

DARC 3 – Germany - DK2OM (Wolf)

PSE observe:

FSK transmissions -> center frequency between mark and space

PSK transmissions -> center frequency (subtract the modem frequency!)

ALE (MIL188-141A) -> USB frequency – exclusive bands: black – nonexclusive: blue

SH = shift --- SP = spread (radar) – SPS = sweeps/sec (radar)

REP – Portugal – CT4AN (Jose Francisco)

Jose informs:

My Big Congratulations to Uli for the fine action over the Russian CB Taxis on 10 !

1 - Here is attached our log for October's MS Report.

2 - The situation referred to 25.11.2011 on 40m, 7.070 MHz (7.069,86 MHz, J3E-L, 50uV, -73dBm) with Portuguese music transmitted on Lower Sideband during some hours without any accepted stop to the on-air requests, was then communicated to our Anacom authority (ICP Centro PT - Communications Control Center in Barcarena) at 22.58 UTC and developed a tracking of it for DF. An official investigation was then open on my request.

3 - PLC is dropping down in Portugal due to the joined efforts of our EMC Team with ICP-Anacom field Eng. which have made a fine on-field collaborative work.
Due to the new EC Rules to the analysis of Radiated Interferences and the proliferation of optic-fiber cable installations, we found our way of action well choosed and followed till now, with positive results. The interfered Ham Stations are now a few compared after the authority's action against PT Telecom with some "go & stay-out-service" equipments and remote controlled notch filters action.

4 - Problem with Sodium-Vapour public lamps is increasing and interfering now deeply our 80m Band with levels sometimes ranging -70dBm.
This problem is being researched on Lab tests and the actions against it are to be taken and discussed with Anacom and National Energy Company.

5 - Domestic Energy Saver lamps interference problem on Lower Bands is being Lab analyzed and tested too over Philips and Chinese lamps.

6 - Pondered Noise floor measured on our HF Bands during October was averaged rising -2dBuV (-109dBm) even with spikes resulting from QRN and White noise from Sun's activity and its strong wind with a few Black-out situations. Propagation was detected as fair on Shortwaves.

Kind Regards, José
